João Vitor Nogueira Xavier

DevOps / Platform Engineer

Remote · Brazil, UTC−3, 1–2h offset to US Eastern · Open to contract or full-time offers
English C1 · +55 62 98333-9111 · jnogxavier@gmail.com · jnogxavier.com.br · linkedin.com/in/jnogxavier · github.com/jnogxavier

SUMMARY

DevOps / Platform Engineer working on a production multi-cloud platform: Kubernetes, OKE, Oracle Cloud, AWS, ECS. I implemented the GitOps workflow with ArgoCD and the Azure DevOps CI/CD templates that standardize build and deploy of backend, frontend and mobile services in a financial-services environment. Before that, 5+ years as a full-stack and mobile developer, so I read and debug the code of the applications I run.

SKILLS

Containers and orchestration: Kubernetes, OKE, AWS ECS, Docker, Helm
GitOps and CI/CD: ArgoCD, Azure DevOps, Azure Pipelines, GitHub Actions, Harbor, Kamal
Cloud: Oracle Cloud, OCI, AWS, ECS, CodeArtifact, Cloudflare
IaC: Terraform, Helm, Ansible
Systems: Linux, Bash, Shell scripting, Git
Database: PostgreSQL
Messaging and gateway: Apache Kafka, KrakenD
Observability: Grafana, Loki, Prometheus, OpenTelemetry, Fluent Bit
Security and quality: Entra ID, SSO, OIDC, Keycloak, RBAC, AWS Secrets Manager, External Secrets, SonarQube, Semgrep, Gitleaks, Trivy
Languages: English C1, Portuguese native

EXPERIENCE

DevOps Engineer — BCJ

Feb 2026 – Present · Goiânia, Brazil

- **GitOps:** introduced and maintained the deployment standard with ArgoCD, ApplicationSets and a shared Helm chart, **adopted by multiple teams and clusters**, covering every microservice across all environments. Ran end-to-end onboarding of new services and partner integrations, dev to production: Helm values, secrets, Kafka topics, routes and RBAC.
- **CI/CD:** primary author of the Azure DevOps pipeline templates for backend, frontend, mobile through app-store publishing and SDKs to AWS CodeArtifact. Consolidated single-stage and duplicated pipelines into canonical templates with multi-stage builds and caching: **run time dropped from ~15 to 6–8 min**, and new-service onboarding went from a full day to **~2h worst case**.
- **Quality and security in the pipeline:** added SAST with Semgrep, secret scanning with Gitleaks and SonarQube quality gates on every build, plus sensitive-data masking in logs via Fluent Bit and Swagger API docs published on every merge. Isolated build agents per project to remove Azure pool contention.
- **Identity, access and edge security:** SSO and RBAC with Entra ID on ArgoCD and the Kubernetes clusters; OIDC service configuration with Keycloak. After a series of intrusion attempts I worked the response and deployed rate limiting, traffic origin restriction and role-based authorization on the KrakenD gateways, applied by default to every new endpoint.
- **Multi-cloud platform operation, OKE on OCI and ECS on AWS:** Kafka, PostgreSQL administration, KrakenD gateways segmented by audience, secrets in AWS Secrets Manager delivered through External Secrets, Harbor with Trivy image scanning and observability with Grafana, Loki, Prometheus and OpenTelemetry. Codified the OCI infrastructure in Terraform, which until then existed only in the console, applied via pipeline.

Full-Stack Developer — Freelance

Jul 2025 – Present · Remote

- Management platform for personal trainers, in production: Rails 8.1, Hotwire, multi-level access control. Infrastructure and delivery on my own, with Docker and automated deploy via Kamal.
- 1,409 RSpec examples, enforcing CSP with per-response nonces, Brakeman and bundler-audit in CI.

Full-Stack Developer — SIEDOS Sistemas e Resultados

Jun 2024 – Jun 2025 · Remote

- Government portals (transparency, HR and public-servant portals) for agencies such as the State Court of Justice, the State Court of Auditors and the Supreme Federal Court; REST APIs and relational databases, with job optimization, ~20% runtime reduction.

Full-Stack Developer — Memorial Vivo

Feb 2023 – Dec 2024 · Goiânia, Brazil

- Stripe payments and idempotent webhooks; ran two major-version upgrades of the language and the framework in production; automated test coverage and CI/CD with GitHub Actions.

Mobile Developer — ABA+ Inteligência Afetiva

Feb 2021 – Feb 2023 · Goiânia, Brazil

- Flutter app for therapists of autistic children, published on the Play Store and the App Store, offline-first with cloud sync.

EDUCATION

Technologist in Systems Analysis and Development — PUC Goiás — 2025 – 2027 (in progress)
